

Project Specification

Project Introduction:

Antonios Sotiriou

Ermylos Schubart

This Project aims to become a social network, which allows people to express themselves through posts and comments, while they are also able to evaluate other people's posts, through likes or dislikes. The target users are everyone with a device able to establish an internet connection and the ability to run a web browser.

Planned Features:

As an anonymous user I want to see the posts in descending order from recent to old.

As an anonymous user I want to see other people's profiles.

As an anonymous user I want to register an account.

As a user I want to update my profile.

As a user I want to make a post.

As a user I want to comment on a post.

As a user I want to like a post.

As a user I want to dislike a post.

As admin I want to delete an insulting or in any way provocative post.

As admin I want to delete a user.

Pages:

admin_panel.php	: Displays all posts, admin can delete a post or a user.
comment.php	: Displays all comments of a post. Logged user can add a comment.
connect.php	: Establishing a connection with the database.
functions.php	: Functions which will be shared between files.
home.php	: Home page. Displays all posts in descending order. User can login or register. Logged in users can comment, like or dislike a post.
like_dislike.php	: Adds user to likes Table. If he is already present removes him.

Removes him from dislikes if present. Adds user to dislikes table. If he is already present removes him. Removes him from likes if present

User can't like and dislike a post at the same time.

login.php	: Displays the login form. Starts a new session.
logout.php	: Logs user out and destroys the session.
post.php	: Logged user can write and publish a post.
profile.php	: Logged user can update his credentials and upload a profile photo. Anonymous user can see profile of other users.
register.php	: Displays a register form and creates a user account if it's not already exists.

File upload use:

Users will be able to upload a photo for their profile. This functionality will be available in the update profile page. The formats which will be supported are .jpg and .png. The uploaded files will be saved in the media folder. For each user will be created a subfolder to hold his profile photo. The name of the subfolder will be an md5 hash string of the user email address, to avoid collisions and make it a little bit difficult, to identify a user, by just looking in this folder.

Access restrictions:

Everybody can visit the homepage and read the posts from recent to old.

Everybody can visit the register page and create an account.

Everybody can visit the login page and log in if he has an account.

Only a logged in user can visit the update profile page to upload a photo or change his credentials.
